

SAMMY • CLASS 13

The Words for Thursday

Twelve things to say. Six ways to open when the question isn't one you planned for.

What's Broken

say it → repeat the bold ×3 → say it two more ways → REPEAT

1 주문 후 반품 · 교환 · 취소가 자동 반영되지 않는 게 근본 원인이다

- **The root cause is that** returns, exchanges and cancellations **aren't automatically reflected** after an order is placed.
- It all **comes down to** order changes not flowing back into the order data.
- The problem starts **before the order ever reaches CS.**

REPEAT the root cause is that ~

- The root cause is that the two systems don't talk to each other.
- The root cause is that nobody owns the handover.
- The root cause is that I never set an alarm.

2 3rd party mall 에서 들어온 요청이 주문 프로세스에 반영되지 못한다

- When a customer changes an order on a third-party mall, that request **doesn't make it into** our order process.
- The request **never reaches** the OMS.
- It **gets lost between** the mall and our system.

REPEAT doesn't make it into ~

- The cancellation doesn't make it into the OMS.
- Half of the feedback doesn't make it into the report.
- Most of what I plan doesn't make it into my week.

What's Broken

say it → repeat the bold ×3 → say it two more ways → REPEAT

3 그래서 CS 가 수작업으로 임시로 막고 있다

- So for now, CS is covering it manually, **as a temporary measure**.
- It was only ever meant to be **a stopgap**.
- We've been clear from the start that **this is short-term**.

REPEAT **as a temporary measure**

- We added a second check, as a temporary measure.
- The vendor took on the matching, as a temporary measure.
- I'm working from the café, as a temporary measure.

4 원래 Lotus 런칭 전에 EC Monitor 위에 개발됐어야 했다

- This **should have been built** on top of EC Monitor before the Lotus launch.
- Ideally, this would have been **in place before launch**.
- That step **was missed** in the preparation for Lotus, and we set up the manual process two days before go-live.

REPEAT **should have been built**

- This should have been built before launch.
- The report should have been built into the dashboard.
- The shelf should have been built a little higher.

Why It Can't Wait

say it → repeat the bold ×3 → say it two more ways → REPEAT

5 처음 미팅 때부터 여러 번 부탁했다

- **We raised this from the first meeting**, and several times since.
- This **isn't new** — we've been flagging it since day one.
- I want to be clear that **this has been on the table** for months.

REPEAT **we raised this ~**

- We raised this in the first meeting.
- We raised this with IT twice in August.
- I raised this with my landlord months ago.

6 6개월 한시였고, 이제 4개월 남았다

- We agreed on six months. **That leaves us about four.**
- **The clock is running** on this.
- We're already **a third of the way through** the window we agreed.

REPEAT **that leaves us ~**

- That leaves us about four months.
- That leaves us one vendor for both cut-offs.
- That leaves us twenty minutes for lunch.

Why It Can't Wait

say it → repeat the bold ×3 → say it two more ways → REPEAT

7 TO-BE 가 없으면 문제가 더 커진다

- Without a TO-BE process by then, **the problem only gets bigger**.
- This **doesn't stay where it is** — it compounds.
- The longer we wait, **the more it costs us** to unwind.

REPEAT only gets bigger

- Without a fix, the problem only gets bigger.
- The backlog only gets bigger every cut-off.
- The pile on my desk only gets bigger.

8 이미 클레임이 늘고 있고, 주문량이 늘면 리스크가 커진다

- We're already seeing **numerous claims** for refund delays, cancellation delays and mis-shipments.
- The claims we're seeing are **proof that** the workaround won't hold.
- **As order volume grows, so does the exposure** — including under the e-commerce act.
- Virtually every case is **matched by hand**, in Excel, so errors get through even with checks.

REPEAT as ~ grows, so does ~

- As order volume grows, so does the exposure.
- As the team grows, so does the coordination cost.
- As the city grows, so does the traffic.

Where the Fix Belongs

say it → repeat the bold ×3 → say it two more ways → REPEAT

9 편의상 다 CS 라고 불렀지만 , 정확히는 CS 가 마지막 단계에서 막고 있는 것이다

- For convenience, we've been calling all of this "CS."
- **More accurately**, CS is holding it at the very last step, because Ecom IT & Ops can't be fixed right now.
- CS is **where it ends up, not where it starts**.

REPEAT more accurately, ~

- More accurately, CS is holding it at the last step.
- More accurately, it's a data issue, not a service issue.
- More accurately, I was late because I got lost.

10 앞단 Ecom OPS & IT 가 개선하면 CS 본기능이 제자리를 찾는다

- **If the front end is fixed** in Ecom OPS & IT, **CS can get back to its actual role**.
- Fix it upstream, and CS **falls back into place**.
- The emphasis should be on **fixing it where the data breaks**.

REPEAT get back to ~

- CS can get back to its actual role.
- The vendor can get back to handling calls.
- I want to get back to running in the mornings.

Where the Fix Belongs

say it → repeat the bold ×3 → say it two more ways → REPEAT

11 Ecom 이 IT 와 함께 주도해야 한다

- I'd **propose Ecom undertake the TO-BE work**, working with IT.
- Ecom is **best placed to lead** this.
- This should **sit with** Ecom and IT, with CS supporting.

REPEAT **best placed to ~**

- Ecom is best placed to lead this.
- IT is best placed to size the work.
- She's best placed to explain it.

12 CS 가 시스템 진단 · 개선을 리딩하는 R&R 을 맡아선 안 된다

- CS shouldn't be the team **leading system diagnosis and fixes**.
- We'll need a clear **R&R framework** before anyone starts building.
- We support the fix; **we don't own the build**.

REPEAT **we don't own ~**

- We don't own the build.
- We don't own the mall integrations.
- We don't own the parking lot, so we can't fix it.

WHEN A QUESTION COMES OUT OF NOWHERE

Six Ways to Open

Say each one three times. Then take the questions on the right, one by one — pick an opener, and start from it.

BUY TIME

That's a fair question. Let me take a second on that.

Let me make sure I answer the right question.

ACKNOWLEDGE, THEN TURN

I take the point on ~. What I'd add is ~

That's true, and it's exactly why ~

NO NUMBER ON HAND

I don't have that figure with me. I'll send it by ~.

I'd rather give you the exact number than guess.

OUTSIDE YOUR SCOPE

That sits outside CS, but from what I've seen, ~

I can speak to the CS side of that.

WHEN THE BLAME TURNS TO YOU

I understand why it looks that way. The data breaks before it reaches CS.

We're the last step, so we're where it shows up.

PUSHED FOR AN ANSWER NOW

I can commit to ~. For ~, I'd need Ecom's input.

Could we put this on the agenda for the next steering meeting, with an owner and a date?

WHAT THEY MIGHT ASK

- 1 We don't have IT resources until next year.
- 2 Can't CS just keep doing it?
- 3 Why wasn't this raised earlier?
- 4 How much is this actually costing us?
- 5 Is this a vendor problem?
- 6 What does the TO-BE look like?
- 7 Can you cut the error rate in the meantime?
- 8 Who agreed to six months?
