JUNE · IAS 2026 · CLASS 15

What They'll Remember

Five more ways into the same paper. No slides yet, no full run — just you, talking about your own data until it sounds like you.

PART 1 · 15 MIN

The Part You're Least Sure Of

June 이 먼저 말해요 . 어디가 제일 자신 없는지 — 그리고 거기서 올 질문 둘 .

FROM THE PAPER

n 10 per group · 1:9 male:female in FCG and CG

Follow-up none — no retention test

DPSI no interaction, despite the trunk change

Effect sizes η^2p 0.26 (IC) · 0.34 (peak) — paper says interpret with caution

BRIAN ASKS

- Which part of this paper would you rather nobody asked about?
- Say that weakness out loud in one sentence — without apologising for it.
- What are the two questions most likely to come from that spot?
- For each one: your first sentence back. Not the whole answer — the first sentence.
- If the questioner pushes a second time, what do you concede, and what do you hold?

WHAT JUNE SAID · 발표 대본으로 갈 문장

FROM YOUR WORDS **negligible · entail**

PART 2 · 15 MIN

Why the Foot Changed the Trunk

전문용어 없이 1 분 . 발표 뒤 제일 많이 받을 질문이 이거예요 .

FROM THE PAPER

Chain IFM function → distal stability → less proximal compensation

Pattern in CAI trunk/pelvis rotate toward the stance limb (De La Motte)

What changed FCG trunk rotation ↓ at IC and peak; TCG and CG did not

What didn't static COP · DPSI · ankle, knee, hip angles

BRIAN ASKS

- Explain it to a Pilates instructor: why would training the toes change what the trunk does?
- Now to a surgeon. Same idea, different words.
- Where in that chain are you confident, and where is it a hypothesis?
- The trunk group trained the trunk and the trunk didn't change — how do you say that without it sounding like a failure?
- One sentence, no 'may' or 'might': what do you actually believe happened?

WHAT JUNE SAID · 발표 대본으로 갈 문장

FROM YOUR WORDS **mitigate**

PART 3 · 15 MIN

Monday Morning

임상가의 질문 : " 그래서 월요일에 뭘 시키면 되나요 ?" Table 2 를 처방처럼 .

FROM THE PAPER

Exercises hallux extension · lesser-toe extension · toe spread-out · short-foot · towel curl

Dose 12 sessions · 30 min · 3×/week · 4 weeks · 20-s rests

Progression sitting → double-limb standing → single-limb with wall support

Load towel curl + dumbbell from week 3, 1→3 kg

BRIAN ASKS

- A clinician stops you after the talk: 'Monday morning, what do I give my CAI patient?' Answer in under a minute.
- Which of the five exercises would you keep if you could only keep two? Why those?
- How do you progress it week to week — say it as instructions, not as a table.
- What would you tell them NOT to expect after four weeks?
- Would you add trunk work anyway? Say why or why not in two sentences.

WHAT JUNE SAID · 발표 대본으로 갈 문장

PART 4 · 10 MIN

Which Way Is Better, and Why

회전 방향 . (+) 가 뭔지 , 왜 줄어든 게 ' 좋은 ' 변화인지 .

FROM THE PAPER

Sign (+) ipsilateral — toward the standing leg · (−) contralateral

FCG IC 2.54° → −0.05° · peak 8.84° → 4.84°

Meaning less rotation toward the stance limb = less of the compensation seen in CAI

Caveat a change in strategy, not a measured gain in stability

BRIAN ASKS

- Stand up and show me: which way is 'toward the standing leg'?
- Why is less rotation toward that side a good thing for someone with CAI?
- Could someone argue that less rotation is worse — stiffer, less adaptive? What do you say?
- The FCG went from +2.5° to about zero at contact. Is zero the goal, or just the direction?

PART 5 · 10 MIN

The Follow-Up Study

다음 연구 하나 . 왜 그것부터인지 .

FROM THE PAPER

Gaps the paper names larger sample · longer-term follow-up · retention

Open questions combined foot + trunk? · 8 weeks? · does trunk change reach DPSI with more time?

Your position single-component training may be insufficient (Discussion ending)

BRIAN ASKS

- If you had one more year and 60 participants — what's the study?
- Why that one first, and not the other two?
- What result would make you change your 1st-priority claim?
- Say the follow-up in the form of its title.
- Last thing: in one sentence, what did this study teach you that the next one needs?

THE NEXT STUDY · 한 문장으로
