HOJUN · CLASS 17

Where Would You Put It?

It's been a while. Ten minutes catching up — then 100 million won lands in your account tomorrow.

PART 1 · CASUAL · 12 MIN

Catching Up

오랜만이에요 . 그동안 있었던 일부터 .

1 It's been a while — what's been going on with you?

2 Anything new at the site since we last met?

3 What did you do last weekend, and what's the plan for this one?

4 Your turn — ask me about my trip.

- How was ~?
- What surprised you ~?
- Would you ~ again?

PART 2 · BUSINESS · 35 MIN

100 Million Won, Tomorrow

본인 일과 상관없는 돈 얘기 . 네 가지 중 어디에 두나 — 먼저 감으로 답하고 , 카드 세 장 읽고 , 다시 답해요 .

A

Savings · 예금

Safe. Around 3% a year. You can see every won.

return · guaranteed · inflation

B

Index fund · ETF

Up and down. Long-run average higher. Some years you lose.

volatile · average · hold

C

Apartment · 아파트

Borrow four times what you have. Big if prices rise. Big the other way too.

leverage · mortgage · exposed

D

A small business

Your friend's café needs a partner. Monthly income, if it works.

cash flow · stake · risk

FIRST ANSWER · gut feeling "If it were me, I'd put ~ in ~ because ~." — 30 초 , 숫자 없이 .

HOJUN'S FIRST ANSWER

CASE 1 OF 3

Savings vs. the Index

같은 1 억 , 10 년 . 어느 쪽이 더 남나 — 그리고 중간에 무슨 일이 있나 .

READ IT · 숫자는 여기 다 있어요

- Savings: 3% a year, every year. After 10 years: about 134 million.
- Index fund: eight of the ten years it gains about 12%. Year 3 it drops 25%. Year 8 it drops 15%.
- Even so, after 10 years: about 158 million.
- Catch: in year 3 your 100 million shows as 85. You have to not sell.

SAY IT BACK · 영어로 되짚기

- Which one ends higher, and by how much?
- What happens in year three — say it as if it's your money.
- Why do people sell in year three anyway?
- Which one would YOU hold through year three? Honestly.

TOOLBOX

CASE 2 OF 3

The Apartment Math

1 억으로 5 억짜리를 산다 . 4 억은 대출 .

READ IT · 숫자는 여기 다 있어요

- You put down 100 million and borrow 400 million at 4.5%. Interest: about 18 million a year.
- Prices rise 20% in five years: the flat is worth 600 million. You made 100 million on 100 million — minus 90 million of interest.
- Prices fall 20%: it's worth 400 million. Your 100 million is gone, and you still owe 400.
- Same 20% move. Very different endings.

SAY IT BACK · 영어로 되짚기

- Explain 'leveraged four to one' using these numbers.
- Walk me through the good ending, then the bad one.
- Where does the interest go in each story?
- Is 20% up or 20% down more likely over five years? Do you actually know?

CASE 3 OF 3

Your Friend's Café

지분 50% 에 1 억 . 매달 들어오는 돈이 있다 — 있을 때는 .

READ IT · 숫자는 여기 다 있어요

- 50% stake for 100 million. The café clears about 2 million a month after costs — your share: 1 million.
- That's 12 million a year, 12% — better than any of the above, on paper.
- Year two: a franchise opens next door. Profit drops to zero for six months.
- You can't sell half a café quickly. Your money is stuck until it recovers — or doesn't.

SAY IT BACK · 영어로 되짚기

- What's the return on paper, and why 'on paper'?
- Say what changes when the franchise opens — in cash-flow words.
- What's the one question you'd ask your friend before saying yes?
- Compare this to the apartment: which risk do you understand better?

PART 3 · 15 MIN

Your Actual Answer

카드 세 장 읽은 뒤 다시 . 처음 답과 달라졌으면 뭐가 바뀠는지 .

1. So — where does the 100 million go now? Split it if you want.
2. What changed between your first answer and this one?
3. Which risk are you fine with, and which one keeps you up at night?
4. If your father asked you the same question, would you give the same answer?
5. What's the one thing you'd want to know more about before deciding for real?

FROM YOUR WORDS · 이번 주 단어

incentive

TOOLBOX

I'd split it — ~ in ~, the rest in ~
나눌래요 — ~ 는 ~ 에 , 나머지는 ~ 에

What changed my mind was ~
생각을 바꾼 건 ~ 예요

I can live with ~, but not ~
~ 는 괜찮은데 ~ 는 못 견뎌요

I honestly don't know enough about ~
~ 는 솔직히 잘 몰라요

Before I decided, I'd want to ~
결정 전에 ~ 하고 싶어요
