LEO · CLASS 26

Leo, Tonight

A talk show with one guest. The host asks. You tell the story. We write it down together.

OPENING

HOST

Tonight's guest is a server developer from Seoul. Leo, introduce yourself in thirty seconds.

AND THEN *What would surprise people about you?*

job | team | what I build

LEO SAYS

I’m a server developer and then I work at Naver Webtoon.
I have experienced for five years. So for now, I develop Webtoon image storage.
And Naver Webtoon is my first company as a server developer.
Thank you.

Last year, I travelled at Egypt for 2 weeks. It was with my friend.
I think Egypt is one of the hardest country for travelers.

HOST

You told us your job is almost zero percent coding now. What does a good day look like for you?

YOU TOLD US *“managing and directing Claude”*

AND THEN *Is there a meeting you'd delete from your calendar?*

review direct ship

LEO SAYS

I feel a good day disappeared. Because Ai assist our coding. That makes so many tasks.

Ai supporting our job so that makes a lot of tasks.

But member recruiting disappeared but more tasks.

Zero percent coding is actually not good thing. I heard that after revel the world, almost every developers felt tired.

Too much work and they feel possible laid-off.

Your friends say your job is easy. What's the hardest part they never see?

YOU TOLD US *“they think my job is easy”*

AND THEN *Who do you keep in the loop when something breaks?*

decide | responsible | 3 a.m.

LEO SAYS

They never see this situation. Ai make our developer a lot of tasks. They just see Ai support coding and they say your job is easy to do.
Actually, so many people not developer, try to make a app. That is why they say that your job is easy.

Making new app and release app have to think so many situations that security and personal information.
So many things to consider. But almost everyone do not know this.

(Is this currently happening and creating problems?)
I think currently problems are happening. Because, recently I have seen the news that a lot of Ai creating apps being targeted to be hacked.

If AI writes the code, what makes a developer worth hiring in five years?

YOU TOLD US *“someone still has to decide what to build”*

AND THEN *Will working with AI become the default for every team?*

judgment | ask | trust

LEO SAYS

Because Ai writes the code, someone needs to manage necessarily.
So after five years, actually something that theory is very important.
Just a click vs. command based on theory. The latter is better than just a work of Ai.

(Do you think Ai has creativity at the moment?)
I think no. Because Ai do something when a person commands or requests.
So commander is more creative and then result of Ai will also be creative.

HOST

You said your best lead asked better questions. What's one question he asked that stuck with you?

YOU TOLD US *“he just asked better questions”*

AND THEN *Have you asked anyone that question yourself?*

why | remember | changed

LEO SAYS

HOST

You admitted you used to be defensive. What changed?

YOU TOLD US *“I was too defensive”*

AND THEN *Was there one moment that changed it?*

feedback | listen | now

LEO SAYS

You still play midfield every week. What does soccer give you that work doesn't?

YOU TOLD US *“winning and losing”*

AND THEN *Who's the best player in your squad?*

team | switch off | Sunday

LEO SAYS

Soccer give to me the energy. Because soccer have to do team work by all players. That is why it is giving me an energy.
And then, very energetic movement is giving more excited feelings.
Soccer give me switching off from work. And it gives me a refreshment.

If I work out more powerful, that gives me a same feeling. But work out is doing it alone so still not exciting as soccer.
Work out is just a mentality driven sport. High weight lifting is painful. I have to tolerate that painful feelings. So that is difficult for me to feel the excitement.

A 200,000-won keyboard, a new mouse... What's the next thing on your list, and how will you justify it?

YOU TOLD US *“No regrets”*

AND THEN *Who do you have to convince first?*

upgrade | worth it | excuse

LEO SAYS

Actually I have all of them. The next thing is laptop. But for now, ram price is higher and higher than before.
So buying something will be next year or an year after. So I don’t want anymore something at this point.

Iceland or Palau — have you booked anything yet? What's really stopping you?

YOU TOLD US *“I want to go to Palau first”*

AND THEN *What's the first thing you'd do after landing?*

time off | budget | someday

LEO SAYS

Because of the money. And no time. That’s all.
Still I want to go to Palau first.
I don’t know what there is in Palau. So now I don’t know what to do yet.

HOST

Why Silicon Valley? What do you want there that you can't get here?

AND THEN *What's the hardest part about leaving Korea?*

scale | people | challenge

LEO SAYS

Actually I really want to go to Silicon Valley.
But now IT market is very unstable. So in US, employee laid-off is easier than Korea. So better stay in Korea for now.
Recently I watched some movie about international career fraud. So need to be careful.
So I don’t know my future but anywhere someday, I want to go Silicon Valley.

I think that point is about people’s perception that Silicon Valley has good people.
That gives a chance to meet good people by working in the Silicon Valley.
If I’m there, I really take an effort a lot more.

(If you can meet only one person in your field, who would that be?)
I have never thought about it. I will meet a person who created an Ai.

HOST

Picture yourself there two years from now. Walk us through a Monday.

AND THEN *What's the happy ending to that day?*

morning | standup | after work

LEO SAYS

RAPID FIRE

Pick one. One sentence why. No thinking.

1 Slack or email?

2 Remote or office?

3 Iceland or Palau?

4 Keyboard or mouse?

5 Lead or build?

LEO SAYS

FROM YOUR WORDS · 지난주 단어 calendar · loop · default · squad · landing · ending
